

The Neptune Space PREDATOR is the newest innovation in the Neptune Series of full face masks. This new edition of the Neptune Space mask is constructed with parts made of Ergal®, a lightweight and durable aluminum compound used in aeronautics for applications requiring high mechanical resistance.

The front cover of the mask's state-of-the-art integrated regulator, the adjustable knob and its internal trim screw are all made of laser-cut Ergal®. These parts have a light gold finish which recalls the helmets of the first deep water divers.

A stainless steel AISI 316 frame and six stainless steel fast-release buckles not only give the mask a sturdy feeling, but also provide an unbreakable framework. Each part is laser-cut and hand finished.

The mask design allows divers to make sensitive micro adjustments to the airflow, even when using gloves. Surface treatments protect the mask from salt water damage and tech polymer protection treatments allow the Neptune Space PREDATOR to be used in extreme conditions.

- State-of-the-art integrated regulator
- Reduced internal volume
- Improved visual field; visible light transfer of visor is 92%
- Premium grade silicone rubber bellows-type skirt (30-45 mm, double that of a conventional mask)
- Durable, scratch-resistant visor
- 4-position adjustable exhaust valve
- Patented 3-D equalization system
- Six strap head harness, providing firm mask positioning and quick mask donning and doffing
- Integrated surface air valve
- Easy access rubber purge button
- Total weight of 970 g (2.13 lbs) and a positive buoyancy of 296 g (0.65 lbs), providing a light and comfortable fit
- Can be used with a communication unit and various Neptune System accessories
- Two sizes, medium/large and small/medium

The PREDATOR is specifically designed for professional and high performance applications and comes with a limited lifetime warranty.
